

FIFA ULTIMATE TEAM

By Ricardo Rodriguez & Javier Miranda

Project Description

- Database of FIFA Player Stats & Info in the form of a web application
- Users can create accounts/login
- Search Engine, Squad Builder, and Squad Summary/Stats

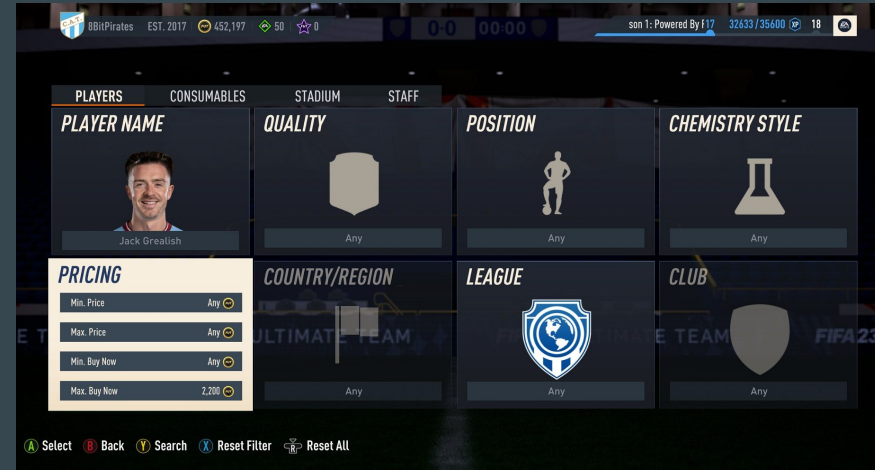

FIFA

Project Description

Searching for players and filtering your search

- User can search between teams, positions, player rating, league, nationality, and player name
- Once a player is found all information about them will be shown
- The user can select them to be on their team roster

Project Description

- The user can get the team summary of the squad: Rating for metrics of all players
- User can save the team in Saved Squads

How we build it

Front-end: HTML, CSS, JavaScript

Backend: Python, Flask

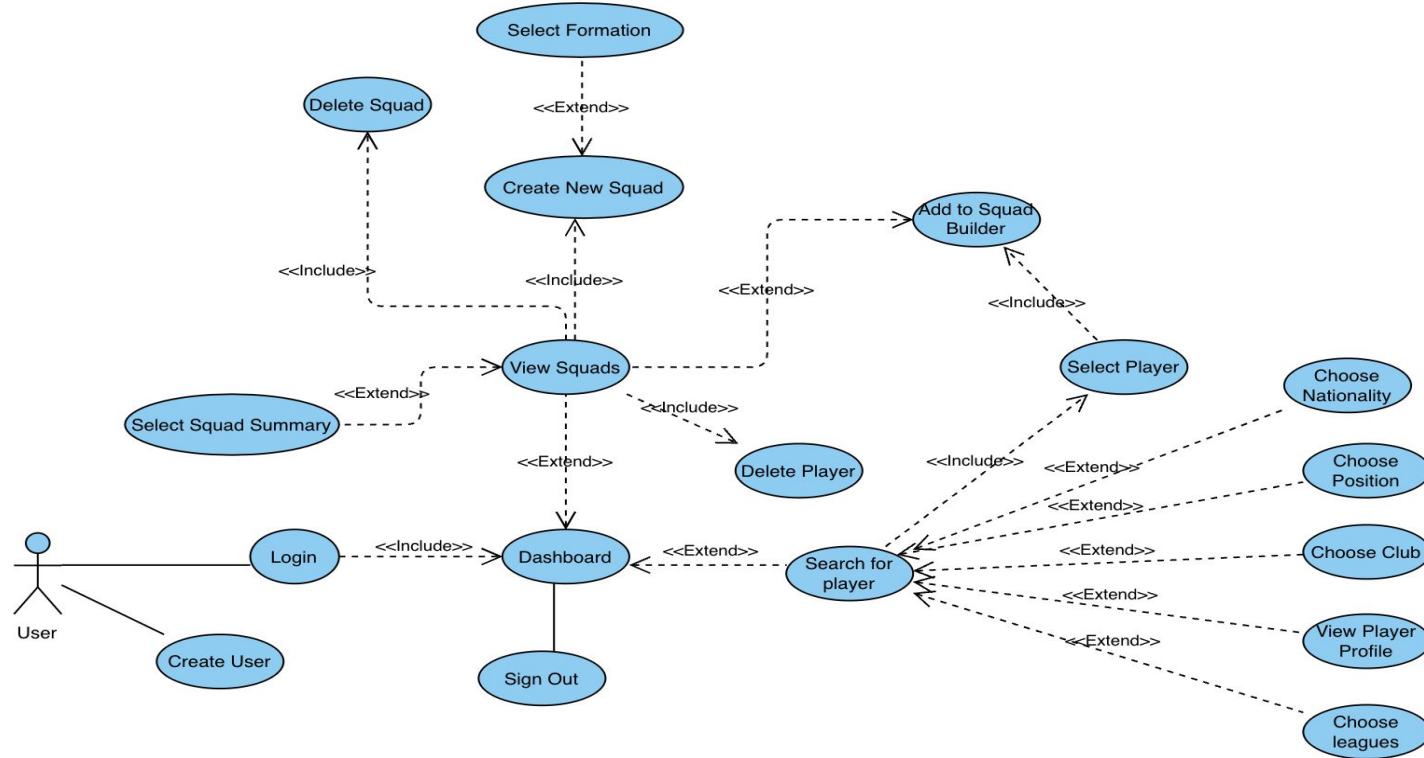

Database: SQLite, Python

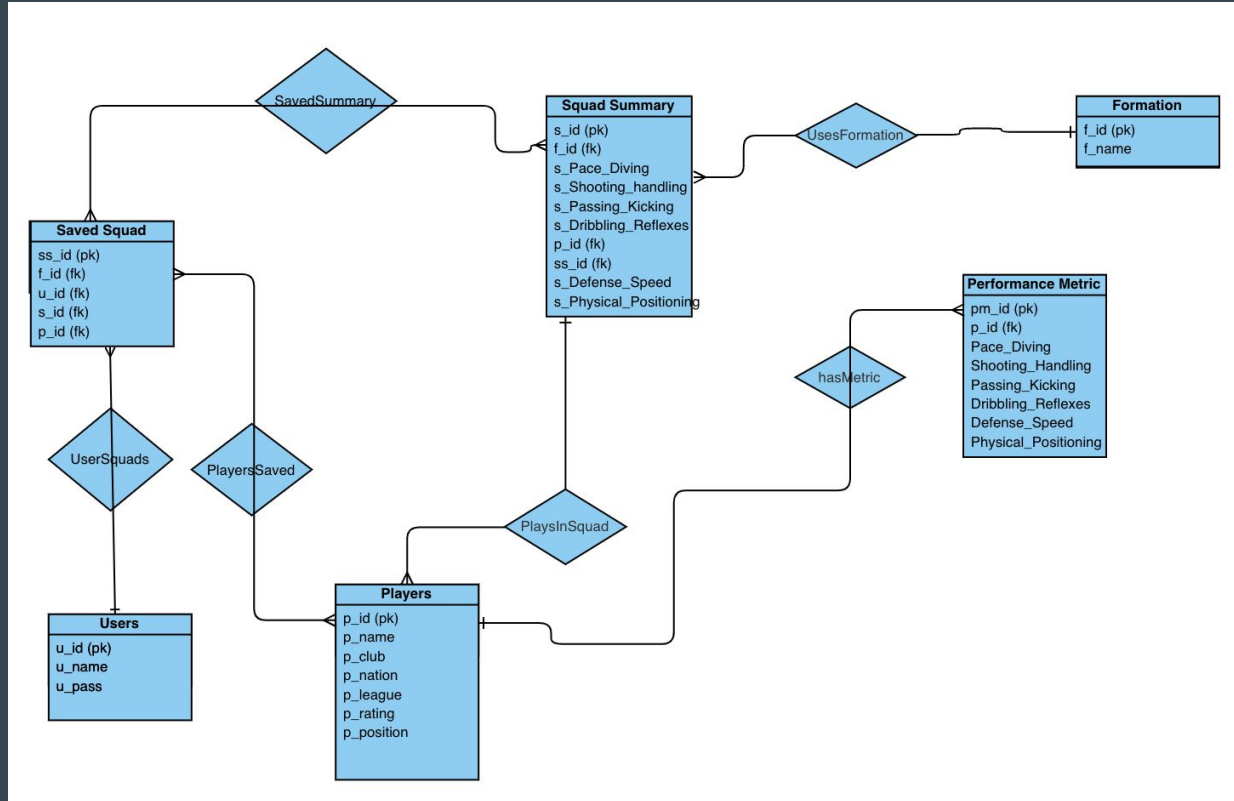

Flask

web development,
one drop at a time
